720	Septicemia & disseminated infections	318

Colorado Hospital Association

Mission Statement

Support members' collaborative commitment to advance the health of their communities through affordable, accessible, high-quality health care.

Who We Are

The Colorado Hospital Association (CHA) is the leading voice of Colorado's hospital and health system community. Representing more than 100 member hospitals and health systems throughout the state, CHA serves as a trusted, credible and reliable resource on health issues, hospital data and trends for its members, media, policymakers and the general public. Through CHA, Colorado's hospitals and health systems work together in their shared commitment to improve health and health care in Colorado. For more information, visit www.cha.com.

Data Services

Through the publication of this report on hospital charges and average length of stay, Colorado hospitals continue their commitment to helping the public better understand the health care delivery system.

This publication is based on CHA Discharge Data Program, an administrative database established in 1979. In addition to charges and average lengths of stay, inpatient quality indicators are available from the Discharge Data Program at www.cohospitalquality.org. CHA also maintains a financial database called DATABANK, the source of *CHA Reference Guide to Colorado Hospital Financial and Utilization Data*.

Hospital Charges and Average Length of Stay

Consumers and purchasers of health care — such as businesses, insurance, managed care companies and the general public — seek information to compare the cost and quality of hospital care. Since 1988, Colorado hospitals have released information on the charges and length of stay for the 35 most common inpatient medical conditions and surgical procedures performed in Colorado hospitals. CHA provides average hospital charges and length of stay for procedures not included in this report. Each hospital can provide estimated charges for a person who anticipates being admitted.

Charges cannot be used to judge quality of health care. Hospital-specific inpatient quality indicators are available for 11 conditions and procedures at www.cohospitalquality.org. Consumers can use the quality and charge information together to ask better questions and to make more informed decisions about their health care.

Why Charges May Vary

Charges vary for many reasons. The following are some of the factors that affect charges.

Individual responses: Outcomes and length of stay vary, even for the same diagnosis. No two patients, their health status, reactions to treatment or recovery time are identical.

Unpaid care: The number of patients whose care is not fully paid affects charges. The gap between the cost of care and payment results in those costs being “shifted” to other patients.

Patients enrolled in Medicare and Medicaid (government-funded programs) accounted for more than 50 percent of hospital days statewide in 2015. A hospital with a high number of Medicare or Medicaid patients must set charges high enough to recover the shortfall in costs not paid by these programs. Appendix C shows the percentage of Medicare and Medicaid patient days for reporting hospitals.

People with inadequate or no health care insurance who cannot afford to pay for their care also contribute to cost-shifting.

Complexity of care: Hospitals that offer more complex services (such as burn units or trauma care) use more resources to treat patients, so charges are higher.

Comparability of billing: What is included in the charges may not be comparable. For example, Medicaid and some health insurers require hospitals to include care for both the mother and the newborn as part of delivery charges (APR-DRGs 540 and 560). Other health plans require these charges to be billed separately. Hospitals with a high percentage of patients with combined charges for mother and baby appear to have higher delivery charges. Similarly, charges for hospitals where physician fees are included will appear higher than at hospitals where they are not.

Individual physician judgment: Charges for some APR-DRGs, such as vaginal delivery (560), have little variation within the minor severity level because physicians agree on standard treatment. Other APR-DRGs have a significant range of charges — even within the minor severity level — because the category includes a variety of illnesses for which treatment varies. An example is chronic obstructive pulmonary disease (140), which includes both bronchitis and emphysema.

Medicine is an art as well as a science, and individual physician judgment — based on education, experience and patient needs — influences treatment decisions.

Talk to Your Physician and Hospital!

Studies have found that well-informed patients who actively participate in their medical care often have better health outcomes than more passive patients. Ask questions about your diagnosis and proposed medical care; written information may be available. If the terms are too technical, ask for their definition. Clear information will help you more successfully follow your physician's advice. This report is *one* tool to help you be a more active participant in the health care system; use it as a *guide*.

- Ask your physician which APR-DRG category (defined in the following section) might be comparable to your condition. (Many physicians will be more familiar with the standard DRG numbering system.)
- Review the number of patients treated at each hospital, the average length of stay and the average charges for each of the severity categories. Check the inpatient quality indicators (www.cohospitalquality.org) if they are related to your condition or proposed procedure.
- Ask your physician and hospital (start with a patient representative or admissions counselor) how your condition and health status might affect costs, procedures, and length of stay.
- Ask your insurance company what is covered under your plan and what you will be expected to pay out-of-pocket for the proposed medical care. If you are concerned about your ability to pay, talk to a hospital financial counselor prior to admission if possible.

Here are some questions to ask when your doctor recommends tests, surgery or other procedures:

- What operation, treatment or tests are being recommended? Why?
- What are the benefits, risks and alternatives? What could happen without treatment?
- How many of these cases have the hospital staff or physician treated?
- Will the outcome of a test affect treatment?
- How soon does surgery need to be done?
- What are the qualifications of the surgeon, anesthesiologist or other key health care providers who will be involved?
- Can you receive the care as an outpatient without staying overnight in a hospital?
- How long will recovery take? Will there be limits on activity during recovery?
- What kind of pain will there be after surgery? How will it be managed?

- What are the charges and fees? (See the section “Why Charges May Vary”)
- What additional charges may be incurred? For example: Will there be a bill from a laboratory or a medical specialist to read an x-ray or other test? Will there be other consulting specialists, such as an anesthesiologist?
- Will Medicare and/or other insurance cover charges? Will the physician accept the insurance payment in full? Do the physicians accept the same insurance as the hospital? (They may NOT in some cases)
- Is home health care an option?

Diagnosis Related Groups (DRGs) and APR-DRGs: What Are They?

DRGs

Diagnosis Related Groups, or DRGs, were developed for Medicare as a means of relating injuries and illnesses a hospital treats to the costs incurred by a hospital. This system groups the thousands of existing treatments and procedures into similar categories of diseases and diagnoses. Payment rates are set for specific DRGs based on what an *average* patient within a category of disease might be expected to cost a hospital to treat. A hospital is paid that rate regardless of how ill a patient is, how long the patient stays in the hospital or how much it costs the hospital to provide the care. DRGs have several limitations:

- The system was designed for Medicare, a program primarily for people over age 65. The resources used by other patients are not adequately addressed. DRGs do not exist for some admissions to a hospital, such as pediatric admissions.
- DRGs focus on resource intensity (the volume and type of diagnostic and therapeutic services, along with the unit where care is provided for a particular diagnosis) rather than the severity of illness (extent of the illness or disease) or risk of mortality (likelihood of dying).
- DRGs do not recognize the impact of secondary diagnoses of the patient. For example, all patients with “chronic obstructive lung disease” are considered equal. DRGs do not take into account risks due to age or other conditions, such as high blood pressure or diabetes.

APR-DRGs

Substantial work has been done over the years to develop a system that reflects information about the severity of illness of each hospital's patients. One of these systems is the All Patient Refined-Diagnosis Related Groups, or **APR-DRGs**, developed by 3M Health Information Systems.

The APR-DRG system was designed to:

- Compare hospitals across a wide range of resource and outcome measures;
- Evaluate differences in mortality rates;
- Identify opportunities for hospitals to improve quality and other internal management issues.

The basic principle of APR-DRGs is that the severity of illness or risk of mortality of a patient is correlated with the patient's underlying health problems. For example, patients with extreme severity of illness or risk of mortality rankings have multiple serious diseases, such as heart failure or insulin-dependent diabetes.

APR-DRGs incorporate four levels of severity of illness (how sick a patient is) and risk of mortality (likelihood of dying), in addition to the resource intensity used by DRGs. The levels are minor, moderate, major and extreme. These are not "scores" and do not describe a hospital's total patient population. A severity level of "major" is not equivalent for a patient with a fractured leg and a patient with heart failure.

DRGs are combined into 316 APR-DRGs that include diagnoses not used for the Medicare population, such as pediatric diagnoses.

How to Read This Report

This report provides information about hospital inpatient charges and length of stay for calendar year 2015. Physician charges and outpatient surgery charges are not included. The following descriptions and definitions will help readers understand the data pages.

APR-DRG NUMBER and NAME: In the top left-hand corner of each page is the APR-DRG number and name. The data are presented in numerical order using the APR-DRG number. A list of the 35 APR-DRGs in this report is on pages 15-16. These 35 APR-DRGs accounted for more than 54 percent of the discharges from 74 acute-care hospitals in Colorado in 2015.

A ranking of the number of patients admitted to Colorado hospitals by APR-DRG is in Appendix A.

Beginning with 2015 data, version 32.0 of 3M's APR-DRGs was used for analysis. Version 32.0 superseded version 31.0. There are 316 APR-DRGs in version 32.0 (314 base APR-DRGs and 2 ungroupable APR-DRGs). For version 32.0 APR DRGs, there are a total of 13,677 ICD-9-CM diagnosis codes. This report uses Version 32 of 3M's APR-DRG.

MDC: Three hundred and five (305) APR-DRGs combine into 25 Major Diagnostic Categories (MDCs). Eleven APR-DRGs are not grouped. Appendix B shows data by MDC. The list of the 35 APR-DRGs included in this report (pages 15-16) shows the corresponding MDC.

PEER GROUP: Hospitals are grouped according to the Medicare payment method that applies to each one. They fall into four categories: Denver Metro, Other Urban, Rural, and Critical Access Hospitals. The list of Participating Hospitals (pages 13-14) includes the peer group for each hospital.

HOSPITAL NAME: Colorado's acute-care hospitals are in alphabetical order within each peer group by APR-DRG. If a hospital did not treat patients in an APR-DRG, it is not listed. This report does not include rehabilitation, psychiatric, specialty or children's hospitals.

SEVERITY: The APR-DRG system assigns levels of severity, or how sick the patient is, by considering:

- Principal diagnosis, the main reason for admission to the hospital;
- Secondary diagnoses, underlying or complicating conditions such as diabetes or hypertension;
- Age;
- Presence of certain non-operating room procedures, such as dialysis.

The levels for severity of illness are minor, moderate, major and extreme.

MINOR severity of illness is relatively without complications or secondary diagnoses that would consume additional resources.

MODERATE, MAJOR and EXTREME levels each have additional factors that make the illness worse and require additional resources to provide care. These factors may be different for each illness category.

TOT/AVG is the **total** number of patients treated for all severity levels and the **average** length of stay and **average** charges for all patients in that diagnosis category.

OUTLIERS will be found for some hospitals under **Tot/Avg**. This is the number of patients who have an unusually short or long length of stay compared to other patients in the same category. Exceptionally short or long lengths of stay may be due to death or transfer to another facility, a catastrophic condition, or coding or data submission errors. These exceptional values are excluded from the calculations because they distort the averages. Charges-per-day less than \$150 or more than \$100,000 also have been excluded.

of PTS: This shows the **number of patients** in each severity level and the total number of patients treated in this APR-DRG for each category and each hospital.

Each level of severity and the total must represent at least five patients or the information is suppressed because of the lack of statistical validity. The symbol “.” is used to reflect fewer than five patients.

LENGTH OF STAY is shown by three numbers:

- **ALOS** is the **average length of stay** for patients in each severity level and for all patients.
- **LOW** and **HIGH** numbers reflect the statistical standardized range for length of stay. There is 95 percent probability the expected length of stay lies between these numbers. Standardized range is calculated separately for each hospital and each category. This shows what is likely to happen in that hospital. **Peer Group Totals** can be used for comparisons.

TOTAL CHARGES are shown by three numbers:

- **AVG CHG** is the average charge for patients in each severity of illness level and for all patients. *These are hospital charges and, in most cases, do not include separate physician charges.*
- **LOW** and **HIGH** numbers reflect the statistical standardized range. There is 95 percent probability that the expected charges lie between these numbers for this hospital. The standardized range is calculated separately for each hospital and each category. This shows what is likely to happen in that hospital. **Peer Group Totals** can be used for comparisons.

PEER GROUP TOTAL: At the end of each grouping of hospitals (Denver Metro, Other Urban, Rural, and Critical Access Hospitals) is the **total** for number of patients in that group of hospitals and **peer group average** length of stay and charges.

STATEWIDE TOTAL: At the end of each APR-DRG category is the **total** number of patients statewide and the **statewide average** length of stay and charges.

Participating General Hospitals

APPENDICES

Appendix A

Most Common Reasons for Hospitalizing Patients in 2015						
2015 Rank	2014 Rank	APR-DRG	All Payer Refined Diagnosis Related Group (APR-DRG) Title	Patients	Percent of Total	Accumulated Percent
1	1	640	Neonate, birth weight greater than 2499 grams, normal newborn or newborn with other problems	46665	9.75	9.75
2	2	560	Vaginal Delivery	43658	9.12	18.87
3	4	720	Septicemia & Disseminated Infections	19548	4.08	22.96
4	3	540	Cesarean delivery	16950	3.54	26.50
5	5	302	Knee joint replacement	14765	3.09	29.58
6	6	301	Hip joint replacement	10593	2.21	31.80
7	7	139	Other pneumonia	8602	1.80	33.59
8	8	194	Heart failure	7696	1.61	35.20
9	9	304	Dorsal and lumbar fusion procedure, except for curvature of back	6476	1.35	36.56
10	10	460	Renal failure	5684	1.19	37.74
11	13	133	Pulmonary embolism & respiratory failure	5212	1.09	38.83
12	11	221	Major small and large bowel procedures	5089	1.06	39.90
13	12	140	Chronic obstructive pulmonary disease (COPD)	4895	1.02	40.92
14	15	45	Cerebrovascular accident and precerebral occlusion with infarction	4815	1.01	41.92
15	16	383	Cellulitis and other bacterial skin infections	4773	1.00	42.92
16	14	201	Cardiac arrhythmia & conduction disorders	4750	0.99	43.91
17	17	463	Kidney & urinary tract infections	4378	0.91	44.83
18	20	174	Percutaneous cardiovascular procedures with acute myocardial infarction	4363	0.91	45.74
19	19	282	Disorders of the pancreas, except malignancy	4180	0.87	46.61
20	18	263	Laparoscopic cholecystectomy	4175	0.87	47.49
21	21	420	Diabetes	3958	0.83	48.31
22	23	315	Shoulder, upper arm & forearm procedures	3783	0.79	49.10
23	22	308	Hip and femur procedures for trauma, except joint replacement	3634	0.76	49.86
24	24	321	Cervical spinal fusion & other back/neck procedures excluding disc excis/decomp	3489	0.73	50.59
25	25	313	Knee & lower leg procedure except foot	3351	0.70	51.29
26	28	247	Intestinal obstruction	3296	0.69	51.98
27	27	254	Other digestive system diagnoses	3204	0.67	52.65
28		425	Electrolyte Disorders except Hypovolemia Related	3189	0.67	53.32
29	26	134	Pulmonary embolism	3162	0.66	53.98
30	30	249	Nonbacterial gastroenteritis, nausea and vomiting (severe flu)	2827	0.59	54.57
31	32	347	Other back and neck disorders, fractures and injuries	2749	0.57	55.14
32	33	53	Seizure	2744	0.57	55.72
33	31	241	Peptic Ulcer & Gastritis	2591	0.54	56.26
34	35	141	Asthma	1839	0.38	56.64
35	34	138	Bronchiolitis and RSV pneumonia	1689	0.35	56.99
			REPORT TOTAL	272,772	56.99	
			STATEWIDE TOTAL, ALL APR-DRGs	478,593	100.00	

The APR-DRG descriptors are shown in layperson's language on pages 15 and 16 of the text of this report.

Appendix B

Major Diagnostic Categories Diseases & Disorders:	Number of APR-DRGs	Number of Inpatients	Percent of Total	Average Length of Stay	Total Patient Days	Total Charges	Average Age
1. Nervous System	25	27,877	5.8%	5.98	166,582	2,329,762,286	56

Appendix E

Colorado Hospital Association Discharge Data Program Database

What is the Colorado Hospital Association Discharge Data Program Database?

The Colorado Hospital Association (CHA) Discharge Data Program (DDP) database consists of medical record information from all patients discharged from Colorado hospitals and patients who have hospital-based outpatient surgery. Beginning with 1988, the discharge data comes from all general hospitals, two psychiatric hospitals and four rehabilitation hospitals. The 2015 database (most current full year) consists of 468,157 inpatient records and 440,530 outpatient surgery records. There are up to 32 different data elements (depending on the reporting year) recorded for each patient record. The principal data fields are listed below.

Demographics

- Age in years
- Sex
- Race (if reported)
- Place of residence
- Expected source of payment
- Zip code
- County (if reported)

Diagnosis and Procedures

- ICD-9-CM Diagnosis Codes (up to 15)
- ICD-9-CM Procedure Codes (up to 15)
- CPT-4 Procedure Codes (if reported)
- Day of principal procedure
- Birth weight (1993 on, if reported)
- CMS DRGs
- CMS MDCs
- 3M's APR-DRG Severity Level
- 3M's APR-DRG Mortality Level
- Days on mechanical ventilator (1993 on)
- External cause of injury code (E-Codes)

Duration of Stay and Admission/Discharge Status

- Admission date
- Admission day of the week
- Length of stay
- Admission source
- Discharge date
- Discharge day of the week
- Discharge status

Total Charge and Charge Components

- Total charge (sum of all revenue codes)
- Laboratory charge (UB-04 codes 300-319)
- Pharmacy charge (UB-04 codes 250-259)
- Radiology charge (UB-04 codes 320-359, 400-409, 610-619)
- Routine charge (UB-04 codes 100-239)
- All other charges

What questions can be answered with DDP data?

Data can be aggregated into many different categories including hospital, DRG, severity level, payer type, age group or zip code. Data also can be used to create computed variables such as average length of stay, average charges or median age. These data categories and data elements can be used for patient origin studies, market share analysis, contract negotiations, charge report comparisons, understanding competitors, disease-specific volume reports, understanding health care capacity in response to local community needs, crude- and severity-adjusted death rate analysis, length-of-stay analysis, and patient access analysis. Inpatient quality indicators at www.cohospitalquality.org are also derived from this data.

Who uses DDP data?

Hospitals, researchers, government agencies, insurance companies, businesses, consumers and the media use discharge data. Blinded patient-level data can only be used for public health, research or health care operations as defined in 45 C.F.R., Parts 160 and 164 (the HIPAA Privacy Regulations).

How are DDP data obtained from CHA?

CHA member hospitals receive a series of **standard quarterly reports** based on discharge data as a part of membership services. **Specialized requests** from members and non-members are available as hard copy or an electronic file for a fee. CHA staff will write a software program to produce the desired tabulation as a printout, on an Excel spreadsheet file or in an ASCII file. **All blinded patient records** are available on CD-ROM in a 1500-character layout.

What is the price?

The minimum fee is \$225. Fees are based on the number of records and the time required for data abstraction. For further price details, please contact Bob Finn of CHA at (720) 489-1630 or bob.finn@cha.com. CHA will ask you to fill out an ad hoc request form and will provide a price quote before proceeding with the data request. The form (PDF format) can be found on the CHA website (www.cha.com) under the "Resources" tab, and then the "Discharge Data Program" tab.

What are the limitations associated with DDP data?

Identification of physicians and patients is only shared with reporting hospitals and authorized state and federal agencies in accordance with applicable law. The amount the hospital is actually paid is not obtainable from this database. There are no physician fees included in the reported charges.

DDP data cannot be resold or redistributed to other organizations without CHA approval. Any person within the requesting organization may use the released data. CD-ROM purchases are for all discharges statewide and/or for all ambulatory surgery patients. DDP data cannot be used to identify patients and physicians, or in any advertising by member hospitals or requesting organizations. Any publication or report using CHA DDP data must state that the source of data is the "CHA Discharge Data Program." Hospitals are responsible for the accuracy of the data.

What is done to ensure accuracy?

CHA reviews the DDP data by monitoring for timeliness, accuracy and completeness. Data from hospitals are processed through computer edit routines that flag records with missing or erroneous data. The flagged records are returned to hospitals for review and correction. Corrected records are returned to CHA for data entry and re-editing. Verification reports are generated for hospitals to validate the number of patients, average length of stay and average charge by DRG or principal procedure for ambulatory surgery patients. Comparisons of the data for the same time periods between two different years are analyzed. Variances between the two years of 50 percent or more are followed up with hospitals.

FOR MORE INFORMATION

For more information on the CHA DDP database, please contact Bob Finn of CHA at (720) 489-1630 or bob.finn@cha.com.
